| <b>USC GRIDS</b><br><b>Web Developer and E-board member</b> <ul style="list-style-type: none"><li>Revamped committee website using HTML, CSS &amp; TypeScript, optimizing performance &amp; increasing user engagement by 20%</li><li>Partnered with stakeholders to define and implement scalable features, ensuring continuous platform improvements</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Los Angeles, CA<br>Feb 2024 - May 2024 |
| <b>JPMorgan Chase and Co.</b><br><b>Software Engineer II</b> <ul style="list-style-type: none"><li>Led development and implementation of 27+ new application features using Java and Spring Boot, collaborating with Operations, Production Management, and Client Onboarding teams while adhering to enterprise coding standards</li><li>Conducted and participated in code reviews, managed Bitbucket repositories, and streamlined build processes to ship 5 production releases and maintain high code quality</li><li>Owned full software development lifecycle (SDLC) for 4 fintech SWIFT Payments AMH applications across DEV, QA, UAT, and PROD environments, leveraging Gradle, Jenkins CI/CD pipelines, and ServiceNow to deliver scalable solutions</li><li>Developed automated test strategies and unit/functional tests using JUnit, driving up code coverage by 30%</li><li>Analyzed and resolved 11+ critical technical issues, including patching security vulnerabilities and enhancing encryption algorithms, reducing live production incidents by 35% during monthly on-call rotations</li><li>Boosted team productivity by 40% by leveraging Atlassian tools (JIRA, Confluence, Bitbucket) and Scrum methodologies for agile project management, tracking, and documentation</li></ul> | Mumbai, India<br>July 2021 - June 2023 |

## PROJECTS AND PUBLICATION

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |  |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| <b>eBay Product Search Website and Android App</b>   Angular, Node.js, Typescript, HTML5, CSS3, Android, Java, Python, JSON <ul style="list-style-type: none"><li>Designed a responsive web application using Angular and Node.js to fetch and display eBay product listings via a REST API</li><li>Implemented a MongoDB database to store user wish lists and deployed the application on Google Cloud Platform (GCP)</li><li>Created a companion Android app in Android Studio (Java), integrating backend services with Node.js to enable eBay product searches, wish list management, and seamless item sharing on Facebook</li></ul>       |  |
| <b>Drug Information Project – Web-Based Drug Lookup Tool</b>   React, Python, Flask, AWS EC2, Nginx, Unicorn, Elastic IP <ul style="list-style-type: none"><li>Developed and deployed a full-stack drug search platform handling 10,000+ real-time queries via OpenFDA API, with a React frontend and Flask backend hosted on AWS EC2 using Nginx and Unicorn</li><li>Built a responsive frontend with advanced search by name and alphabet, improving lookup speed and user efficiency by 40%</li><li>Integrated a field-based query chatbot and detailed drug info pages, increasing user engagement and average session time by 30%</li></ul> |  |
| <b>Grow Slide (Unity 2D Platformer Game)</b>   Unity, C#, WebGL <ul style="list-style-type: none"><li>Designed and architected a 2D platformer game with innovative gravity mechanics, enabling players to strategically shrink and expand a controllable ball to solve movement puzzles.</li><li>Integrated dynamic gameplay elements, such as collecting keys to unlock levels, improving user engagement and experience.</li><li>Published game using WebGL, ensuring cross-platform accessibility and high performance</li></ul>                                                                                                             |  |
| <b>Fine Dine with Augmented Reality (AR) – Mobile App</b>   Unity, Vuforia, Blender <ul style="list-style-type: none"><li>Developed an AR-based restaurant app, boosting customer satisfaction by 20%, allowing users to explore 3D visuals of dishes and ingredients through digital or physical menu scans, complete with interactive feedback mechanisms</li><li><b>Publication:</b> Gandhi, M., et al. “Augmented Reality Based Interactive Mobile Application for Restaurants.” ACE 2021</li></ul>                                                                                                                                          |  |
| <b>Predicting Customer Churn in Bank using ANN</b>   Python, NumPy, Keras, TensorFlow, Scikit-learn, Pandas <ul style="list-style-type: none"><li>Created a predictive model using Artificial Neural Networks (ANN), classifying customer attrition rates in a bank with an accuracy of 86.31% and visualizing Neural Networks for clear interpretation and insights</li></ul>                                                                                                                                                                                                                                                                   |  |

## TECHNICAL SKILLS

- Programming Languages:** Java, Python, Go, JavaScript, TypeScript, SQL
- Backend Technologies:** Spring Boot, Microservices, Node.js, Flask, Next.js, Kafka
- Frontend Technologies:** React, Angular, HTML5, CSS3, Bootstrap
- Cloud & DevOps:** AWS, GCP, Azure, Docker, Kubernetes, Jenkins, CI/CD, Terraform
- Databases:** MongoDB, MySQL, PostgreSQL, Oracle, NoSQL, SQLite, Firebase
- Version Control & IDE:** Git, Bitbucket, GitHub, VS Code, IntelliJ, Eclipse
- Operating Systems:** Windows, MacOS, Linux, Unix

## CERTIFICATION

- AWS Certified Cloud Practitioner**, Amazon Web Services (AWS), March 2023
